WATER MAIN BREAK UNDER REPAIR; RESIDENTS MAY EXPERIENCE LOW WATER PRESSURE

(September 9, 2005) City of Frisco crews are working to repair a break in a 36-inch water main, located near the intersection of Lebanon and S.H. 121.

The break was discovered at around 4 p.m. this afternoon.

Crews have been working since then to fix the break and expect the repairs to be finished around midnight.

As a result, Frisco residents may experience low water pressure tomorrow morning (Saturday, 9/10) in some areas of the city.
